

QUANTUM GROUPS, FROM A FUNCTIONAL ANALYSIS PERSPECTIVE

TEODOR BANICA

Dedicated to the memory of Stefan Banach

Communicated by U. C. Ji

ABSTRACT. It is well-known that any compact Lie group appears as closed subgroup of a unitary group, $G \subset U_N$. The unitary group U_N has a free analogue U_N^+ , and the study of the closed quantum subgroups $G \subset U_N^+$ is a problem of general interest. We review here the basic tools for dealing with such quantum groups, with all the needed preliminaries included, and we discuss as well a number of more advanced topics.
